Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	08 April 2026
Team ID	SWTID-2026-8559
Project Name	Enforcing Mandatory Fields Using UI Policies and Migra ng Changes with Update Sets
Maximum Marks	4 Marks

Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub-Requirement (Story / Sub-Task)
FR-1	UI Policy Configuration	1.1 Create UI Policies for forms (e.g., Incident form).1.2 Define mandatory fields based on conditions.1.3 Configure field visibility (show/hide).1.4 Set fields as read-only where required.
FR-2	Dynamic Field Enforcement	2.1 Apply conditions to trigger UI Policies.2.2 Automatically enforce mandatory fields during form entry.2.3 Prevent form submission if required fields are missing.2.4 Display validation messages for users.
FR-3	Form Validation	3.1 Validate user inputs in real-time.3.2 Ensure data completeness before submission.3.3 Restrict invalid or incomplete entries.3.4 Provide error feedback to guide users.
FR-4	User Interface Behavior	4.1 Dynamically update form fields based on user input.4.2 Auto-adjust field behavior (mandatory/visible/read-only).4.3 Ensure smooth and responsive UI experience.
FR-5	Update Set Creation	5.1 Capture all configuration changes (UI Policies, forms).5.2 Create Update Sets automatically.5.3 Assign proper naming and versioning to Update Sets.
FR-6	Update Set Tracking	6.1 Track all configuration changes with timestamps.6.2 Maintain logs of user activities.6.3 Provide visibility into changes made in the system.
FR-7	Migration Across Environments	7.1 Move Update Sets from Development → Test → Production.7.2 Ensure proper sequencing of deployments.7.3 Maintain consistency across environments.
FR-8	Pre-Migration Validation	8.1 Identify conflicts before migration.8.2 Validate dependencies and configurations.8.3 Prevent failed deployments.
FR-9	Testing & Validation	9.1 Test UI Policies on forms.9.2 Verify mandatory field enforcement.9.3 Validate successful migration.9.4 Perform User Acceptance Testing (UAT).

Non-functional Requirements:

NFR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The system should provide an easy interface for configuring UI Policies without complex coding.
NFR-2	**Security**	Access to configuration and data should be controlled using roles and Access Control Lists (ACLs).
NFR-3	**Reliability**	UI Policies must consistently enforce rules, and Update Sets must ensure safe and accurate migration.
NFR-4	**Performance**	Dynamic UI changes should occur instantly without affecting system performance.
NFR-5	**Availability**	The system should be accessible across all relevant ServiceNow modules (e.g., Incident Management).
NFR-6	**Scalability**	The solution should support multiple forms, large-scale configurations, and enterprise-level deployments.
